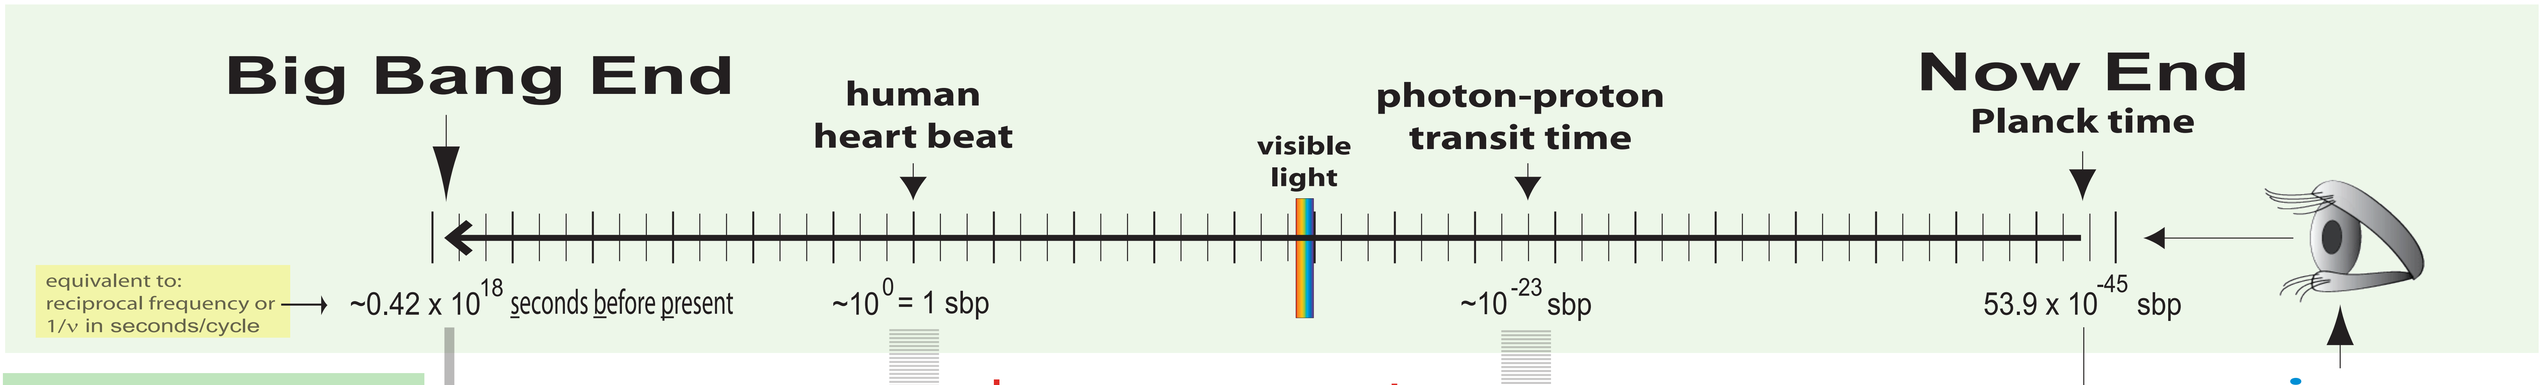
Science of Subtle Energies

A new conceptual tool—The SummaTime Scale:
the "now-origin" cosmic time scale (presented logarithmically)—
defines an inside-out, observer-centered <u>scientific cosmology that includes subtle energies</u>:



How?

1. Electromagnetism divides the cosmos into three distinct but <u>nested</u> and <u>non-separate</u> domains: OUTER, INNER, & INNERMOST.

2. <u>Two</u> of these three are "inside the skin" of our body.

3. Each domain displays distinct features (see →*) which could be first steps toward a science of subtle energies because:

4. These features also seem to align with esoteric categories "gross," "subtle," and "causal."

5. Notice too: this is <u>not</u> "a time line of history." The "atoms" of this cosmos are "Planckian nows," each of which *embraces the entire cosmos* via universal entanglement.

6. AND: the actual "viewer" is outside of time, off scale, if you will, at the Planckian end.

* all ideas and terminology subject to debate.

electromagnetism

outside the skin ← → "inside the skin"

OUTER	INNER	INNERMOST	← DOMAIN
environment	living body-mind	non-local forms	← EXPERIENCE
material	energetic	informational	← STRUCTURE
dissipative	autopoietic	reflexive	← SYSTEM
complex	quaternion	octonion	← ALGEBRA
fractal	non-commutative	non-associative	← GEOMETRY
complex	hypercomplex	hypercomplex+	← ORDER OF COMPLEXITY
"gross"	"subtle"	"causal"	← ESOTERICIST CATEGORY
